Teaching Academic Literacy provides a unique outlook on a first-year writing program's evolution by bringing together a group of related essays that analyze, from various angles, how theoretical concepts about writing actually operate in real students' writing. Based on the beginning writing program developed at the University of Wisconsin-Madison, a course that asks students to consider what it means to be a literate member of a community, the essays in the collection explore how students become (and what impedes their progress in becoming) authorities in writing situations. Key features of this volume include: * demonstrations of how research into specific teaching problems (e.g., the problem of authority in beginning writers' work) can be conducted by examining student work through a variety of lenses such as task interpretation, collaboration, and conference, so that instructors can understand what factors influence students, and can then use what they have learned to reshape their teaching practices; * adaptability of theory and research to develop a course that engages basic writers with challenging ideas; * a model of how a large writing program can be administered, particularly in regards to the integration of research and curriculum development; and * integration of literary and composition theories.

The ideas and teaching strategies presented in this book are clearly developed to actively involve teachers in understanding and thinking about children's reading and writing development. The idea of storytelling goes beyond the borders of language, culture, or traditional education, and has historically been a tie that bonds families, communities, and nations. Digital storytelling offers opportunities for authentic academic and non-academic literacy learning across a multitude of genres. It is easily accessible to most members of society and has the potential to transform the boundaries of traditional education. As concepts around traditional literacy education evolve and become more culturally and linguistically relevant and responsive, the connections between digital storytelling and disciplinary literacy warrant considered exploration. *Connecting Disciplinary Literacy and Digital Storytelling in K-12 Education* develops a conceptual framework around pedagogical connections to digital storytelling within K-12 disciplinary literacy practices. This essential reference book supports student success through the integration of digital storytelling across content areas and grade levels. Covering topics that include immersive storytelling, multiliteracies, social justice, and pedagogical storytelling, it is intended for stakeholders interested in innovative K-12 disciplinary literacy skill development, research, and practices including but not limited to curriculum directors, education faculty, educational researchers, instructional facilitators, literacy professionals, teachers, pre-service teachers, professional development coordinators, teacher preparation programs, and students. *Reading for pleasure* urgently requires a higher profile to raise attainment and increase children's engagement as self-motivated and socially interactive readers. *Building Communities of Engaged Readers* highlights the concept of 'Reading Teachers' who are not only knowledgeable about texts for children, but are aware of their own reading identities and prepared to share their enthusiasm and understanding of what being a reader means. Sharing the processes of reading with young readers is an innovative approach to developing new generations of readers. Examining the interplay between the 'will and the skill' to read, the book distinctively details a reading for pleasure pedagogy and demonstrates that reader engagement is strongly influenced by relationships between children, teachers, families and communities. Importantly it provides compelling evidence that reciprocal reading communities in school encompass: a shared concept of what it means to be a reader in the 21st century; considerable teacher and child knowledge of children's literature and other texts; pedagogic practices which acknowledge and develop diverse reader identities; spontaneous 'inside-text talk' on the part of all members; a shift in the focus of control and new social spaces that encourage choice and children's rights as readers. Written by experts in the literacy field and illustrated throughout with examples from the project schools, it is essential reading for all those concerned with improving young people's enjoyment of and attainment in reading.

Presents strategies for teaching oral reading along with information on how it increases word recognition, fluency, and comprehension.

In this text: *Research and theory are summarized and applied to practice *A non-prescriptive approach is integrated with practical information *Debates in the field are acknowledged *Additional reading and research are emphasized *The author's voice and point of view are explicit
